

Qeeps provides everything in one managed rollout

Qeeps is a service that allows users to connect to, view and control their CCTV systems from most mobile phones and PDAs. Qeeps has integrated with all the leading manufacturers of cameras, DVRs and has a network of Qeeps accredited installers. Qeeps now leverages all this investment by delivering installed completed systems, to budget, on time, for individual premises and major multi-site rollouts.

'Qeeps is powerful and flexible enough to offer the same functions as if the operator was in the control room.'

PETER WIGHTMAN, NEWCASTLE CITY COUNCIL

Customers started asking us to manage everything: provide a ready-working system, with all installation, configuration and support and maintenance included. Seemed like a good idea! **Qeeps Managed**, we call it.

Can Qeeps:

- Provide risk-assessment? Yes
- Could we advise on the best mix of technologies? We work with them all
- Can we also provide monitoring and call-outs? Yes, through our trusted security partners
- Key-holding? Yes, to national standards
- Can we do this across a set of locations, to an agreed timetable? Our project management team is there for you
- Can everything still be done from the mobile as well? That's what Qeeps is all about!

Qeeps Managed provides all that – a complete system with mobile live view and control of PTZ cameras and other equipment (lighting, gates, etc), multi-site, multi-personnel.

Qeeps takes you from a requirement to working system, delivering with a smooth, simple, flexible experience. Qeeps can even provide leasing options.

The Qeeps team will take your requirements and recommend a simplified choice of solutions to match your budget. This is based on in-depth experience of the equipment available – Qeeps has had to integrate with all the leading types. Qeeps will also assist in provision of your broadband (needed for live viewing), addressing and router configuration, recommending and managing any communications requirements for you.

Qeeps can also integrate simply with existing, and legacy, equipment already in use at your location(s). Getting Qeeps™ up and running is very quick and easy as it is integrated with most of the major CCTV systems in the market. This means that Qeeps™ can simply be connected to the existing CCTV infrastructure with little or no impact.

'Installing and configuring Qeeps to work with the existing CCTV infrastructure was very straightforward. There was no impact to services during the installation, which took very little time, and the department were able to connect to Qeeps using their mobile phones immediately'

ANDY GRAHAM, BARRIER SURVEILLANCE

Qeeps allocates a project manager who will control the project; whether it's one building or a nationwide chain.

Qeeps then despatch the installers who will efficiently complete the installation and train you how to use the system, hands-on and remotely over your mobile devices.

The Qeeps team is always there for your support, and is pleased to provide advice, ongoing maintenance, changes and additional services.
